# Botox® & Dermal Fillers Therapy @ Avané Cosmetic Clinique & Medispa

Discover the proven results that 11 million women and men have experienced. With real, noticeable results, no surgery and no recovery time, there are many reasons why BOTOX® & JUVÉDERM® (Fillers) have been chosen by millions of people and their doctors.

You may feel that the moderate to severe glabellar lines between your brows makes you look tired or unapproachable, or have other reasons for being curious about BOTOX® & FILLERS. At Avané we offer consultations on these procedures and will tell you the ins and outs as well as recommend areas where you will benefit from either Botox® and/or Fillers.

## What is Botox® (Botulinum Toxin)?

Botox® is a protein derivative of the Botulinum toxin, which, when injected into a muscle, causes it to become weakened or inactivated. It takes anywhere from two to ten days to block the nerve transmitters which innervate the muscles where it was injected.

## How Does It Work?

Once these motor nerve endings are interrupted, the muscles cannot contract. When the muscle does not contract, the dynamic motion that causes wrinkles in the skin will then cease. The only reason there are wrinkles in the skin in the first place is because the muscle is moving underneath it, hence the dynamic wrinkles. Approximately three to ten days after treatment, the skin above these motor muscles becomes nice and smooth.

The effects of Botox® lasts approximately three to four months depending on various factors including the amount of botulinum toxin A injected, metabolic activity of the patient and lifestyle choices. For the first couple of years, frequent treatments (every 4 to 6 months) are required to 're-educate' the facial muscles. Thereafter, treatments would be less frequent until a yearly maintenance is usually all that is required.

## Is it Safe?

Botox® has been in use since 1978 and there are countless medical studies into its safety and use. Botox® used in minute doses, as it is in cosmetic therapy, has a very high margin of safety.

## What can it be used for?

The most common uses for Botox® is smoothing of the facial wrinkles of the forehead, between the eyes (glabellar region) and around the corners of the eyes (crow's feet). Botox® can also be used in the treatment for hyperhidrosis (excessive sweating).

## What are Dermal Fillers?

Dermal fillers are basically a collagen material made of synthetic or natural substances and is used for injection in the dermis for purposes of augmenting soft tissues. For anyone suffering from problems like wrinkles, folds or depressions such as scars, dermal fillers may be the right product for the job. The procedure is quick, often just 30 minutes or less. Many people experience no pain at all and minimum side effects.

## Experience Rejuvenation!

Hyaluronic acid (HA) is a naturally occurring molecule. Much like a sponge, its primary function is to bind and absorb water, which creates volume in the face. In this way, HA can be thought of as the body's internal moisturizer. As we age, HA diminishes, which contributes to the presence of lines and folds. Dermal Fillers are a nonsurgical, physician-administered treatment for nasolabial folds (smile lines) and other facial wrinkles. Using a fine needle, we ease the filler under the skin to fill the soft tissue of the dermis. This adds volume and diminishes the appearance of wrinkles and nasolabial folds instantly. With just one treatment, you will get smooth and natural-looking results that last up to a year. *Everyone will notice, but no one will know.* Some people may be comfortable with showing signs of advanced age, or perhaps they just "age gracefully." Others are not as comfortable and would like to retain their youth for as long as possible, and this is where dermal fillers can lend a hand.
