

Q: How much does it cost?

A: Compared with a lifetime of shaving, waxing, plucking or depilatory creams, Pain-Free Laser Hair Removal can be a worth while investment in both time and money.

**Laser for Tatoo Removal is also available at
Avané Cosmetic Clinique & Medispa**

Pain Free laser Hair Removal

Pain Free Laser Hair Removal

Having to shave your legs and underarms every day? Having to “grow” your bikini line so you can have a painful wax when you go on holiday? Or do you suffer from embarrassing facial and chest hair? Getting rid of unwanted hair is a hassle we can all do without! Hair removal often triggers images of unpleasant, painful, time consuming, and hair-raising experiences, but not anymore. The New Revolutionary Pain-Free Laser Hair Removal is here. Imagine a life free of unwanted hair. No more waxing, shaving or plucking! Laser Hair Removal makes this dream a reality.

At Avané we are proud to present THE FIRST Revolutionary PAIN-FREE Laser Hair Removal Treatment using The Harmony XL.

Treatment Benefits include:

- **MAXIMUM** Comfort **MINIMUM** Fuss.
- **IN-Motion™** technology for a virtually **PAIN-FREE** treatment without the use of anaesthesia.
- Gold standard 810-nm laser diode provides superior, more, **RELIABLE RESULTS.**
- Permanent hair reduction of all pigmented hair on **ALL SKIN TYPES.**
- **FOR MEN AND WOMEN.**
- Less treatments needed.
- **LESS COST TO YOU.**

What makes this laser treatment different from other treatments?

The 810-nm diode laser is utilized using a new technique called IN-Motion™ thus making this treatment pain free unlike other painful laser treatments. Unlike previous generation systems, the energy from the laser is delivered via low fluence (energy) pulses at a rapid 10 pulse per second repetition rate. The temperature of the hair follicle containing the cells responsible for hair re-growth is raised slowly and the follicle is destroyed. This rise in temperature provides clients with deep dermal heating, a sensation that many users have compared to a soothing hot stone massage. This turns the otherwise uncomfortable process of hair removal into a very enjoyable one.

This revolutionary method of delivering low-level energy via a burst of rapid pulses is what enables Pain-Free, yet **Extremely Effective** hair removal. Less risk of side effects than has ever been possible with other lasers. By constantly moving the hand-piece during treatment, the energy is delivered uniformly, eliminating skipped spots and ensuring patient comfort. Recovery free so you can usually return to normal activities immediately.

FAQ'S

Q:Who is it for?

A: Pain-Free laser hair removal is for everyone. It's safe for all skin types, hair types and most hair colors. The bottom line is if you have hair where you wish you didn't, Pain-Free laser hair removal is for you. The body hair reduction process is permanent, predictable, and virtually pain-free.

Q: Where it's for?

A: Patients seek hair removal treatments for almost any body part, from facial or bikini line treatments to leg, arm, neck or back hair removal. Women mostly have their bikini, underarms, faces, legs and arms, and men usually have their backs, chests, shave lines and neck area lasered.

Q: What you can expect?

A: Results from a series of relatively short sessions. (The actual time depends mainly on the size of the area you are having treated.)

- Complete coverage with no missed spots.
- Fast treatment times.
- Few side effects.
- Return to normal activities immediately (no recovery or “down time”).

Q: How is it different?

A: The Avané technology breaks the mould of previous laser hair removal systems. Our system's unique IN-Motion™ technology, along with the sweeping motion of the laser, safely and gently heats the targeted area under your skin while you stay comfortable.

Q: How many treatments will I need?

A: As with all medical treatments, laser hair removal treatments aren't based on exact science and there are no hard or fast rules or 100% guarantees.

Laser hair removal results depend on a few factors; hair colour, skin colour, coarseness of hair, hair growth cycle, hormones, frequency of treatments etc.

Every person will see a different result at different stages of treatment depending on their particular attributes. In our experience we have noticed that generally our clients have needed an average of between 6-10, maybe 12, treatments to permanently reduce the number of regrowing hairs by more than 80%, six months after the last treatment.

Q: Will my hair ever grow back?

A: The short answer is no. Once the hair follicle is damaged, it cannot grow new hair. However, there are invariably a few hair follicles that manage to partially escape the laser during each treatment. Some of these follicles may be only stunned and will need to be retreated.

Q: Do I need to plan for time off following treatments?

A: No. Laser Hair Removal at the Avané cosmetic clinique & medi-spa requires no “down time” or recovery time. You can have a treatment and return to work or school immediately.
